

Wiley InterScience strives to adhere to the Section 508 Standard and World Wide Web Consortium's Content Accessibility Guidelines 1.0 and is committed to continually improving the accessibility and usability of the site. A primary objective of the August 2003 redesign was to allow the latest assistive technologies to make better use of the site. Since then, Wiley InterScience's User Centered Design team has conducted regular formal user tests of the site's structure, organization and navigation. Conclusions and recommendations from these tests are used to develop and improve the site's usability and accessibility.

#### Standards Compliance

Most pages on this site comply with priority 1 guidelines of the W3C Web Content Accessibility Guidelines. Some comply with priority 2 and 3. This is a judgement call - many guidelines are intentionally vague and can not be tested automatically.

Most pages on this site are Section 508 approved; complying requirements of the U.S. Federal Government Section 508 Guidelines.

An increasing number of pages on the site validate as XHTML 1.0 Transitional.
